

Packaging Solutions: *Maximize Efficiency & Reduce Costs*

Case Study:

\$712,000 savings in shipping costs per year

As a core service to clients, **InterBULK** engineers analyze bag designs and container configurations and make recommendations to improve efficiency.

InterBULK did an efficiency redesign for one of our largest customers using a 40' ocean transport packaging and container configuration. We

were able to maximize cargo space while maintaining their granular product stability during overseas transports. Our engineers reduced overall height and increased bag rigidity which also opened up new opportunities to utilize 20' ocean shipping containers when transporting smaller product volumes.

InterBULK consultation on bag redesign and container reconfiguration saved our client an average of 18% (\$712,000) in shipping costs per year.
When you succeed, we succeed.
